

Tools & Technologies – Practical Experience	
This overview highlights the tools and platforms I have worked with in IT support contexts, showing how they are used to manage users, devices, and day-to-day technical issues.	
Identity & Directory Services (Microsoft Entra ID & Active Directory)- User identity, authentication, access control, and account lifecycle management across cloud and on-prem environments. Practical experience- . Managed users, groups, licenses, and roles . Supported onboarding, password resets, and account unlocks . Configured Conditional Access and MFA workflows Investigated sign-in issues using Entra logs Built an AD lab with GPOs, DNS, and DHCP . Understood how identity, device, and location affect access	Zendesk- IT service management and user support workflows. Practical experience: . Logged, tracked, and updated support tickets . Categorised issues and followed troubleshooting workflows . Communicated updates to users . Escalated issues appropriately . Used ticketing systems to manage workload and priorities
	Wireshark- Network traffic capture and analysis. Practical experience: . Captured and reviewed network traffic . Analysed request/response flows . Investigated DNS and DHCP behaviour . Used packet analysis to support troubleshooting Improved understanding of network communication
	Tenable- Vulnerability scanning and exposure identification. Practical experience- . Reviewed vulnerability scan results . Interpreted severity ratings . Understood common misconfigurations and weaknesses . Linked findings to patching and remediation concepts . Gained exposure to vulnerability management workflows
Microsoft 365 Administration Administration of users, licenses, and Microsoft 365 services. Practical experience: . Managed users and license assignments . Navigated Microsoft 365 Admin Center . Accessed workload admin centres (Teams, Intune, SharePoint) . Reviewed service health and tenant settings . Supported common Microsoft 365 access and usability issues	VirtualBox- Virtualisation platform for testing and learning. Practical experience: . Built multi-VM lab environments . Deployed Windows Server and client machines . Tested identity, networking, and policy scenarios . Used snapshots to safely test changes
