

Operating Systems – Troubleshooting & Key Settings

Highlighted section are commands ran through Command, PowerShell, or Terminal.

Windows 11/10

System Information

OS version / build:

Settings - System - About

Device name / domain status:

Settings - System - About

Uptime:

Task Manager - Performance - CPU

Logs & Diagnostics

Event logs:

Event Viewer

Device issues:

Device Manager

Safe Mode:

Shift + Restart - Troubleshoot - Advanced options

Performance & Startup

Running processes:

Task Manager - Processes

Startup applications:

Task Manager - Startup

Disk usage:

Settings - System - Storage

Network Troubleshooting

IP address:

Settings - Network & Internet - Status - Properties

Wi-Fi / Ethernet status:

Settings - Network & Internet

Flush DNS:

ipconfig /flushdns

Renew IP:

ipconfig /release - ipconfig /renew

User & Account Issues

Signed-in account:

Settings - Accounts

Work or school account:

Settings - Accounts - Access work or school

Local users:

Computer Management - Local Users and Groups

Mac OS

System Information

macOS version:

Apple Menu - About This Mac

Hardware details:

About This Mac - System Report

Uptime:

Activity Monitor - CPU tab

Network Troubleshooting

Wi-Fi / Ethernet settings:

System Settings - Network

IP address:

Network - Active interface - Details

DNS settings:

Network - Interface - DNS

Flush DNS:

sudo dscacheutil -flushcache; sudo killall -HUP mDNSResponder

User & Account Issues

User accounts:

System Settings - Users & Groups

Login items:

Users & Groups - Login Items

Permissions (files/apps):

Get Info - Sharing & Permissions

Performance & Startup

Running processes:

Activity Monitor

Startup apps:

System Settings - General - Login Items

Disk usage:

System Settings - General - Storage

Logs & Diagnostics

System logs:

Console app

Safe Mode:

Hold Shift during startup (Intel)

Power button during startup (Apple Silicon)

Linux

System Information

OS version:

lsb_release -a

Kernel version:

uname -r

Uptime:

uptime

Network Troubleshooting

IP address:

ip a

Network interfaces:

nmcli device status

DNS configuration:

/etc/resolv.conf

Restart network:

sudo systemctl restart NetworkManager

Performance & Startup

Running processes:

top or htop

Disk usage:

df -h

Startup services:

systemctl list-unit-files

Logs & Diagnostics

System logs:

journalctl

Service logs:

journalctl -u servicename

Safe / recovery mode:

GRUB - Advanced options

Linux supports both GUI-based configuration and terminal-based administration, with core concepts aligning closely to Windows and macOS.
