

# Tools & Technologies – Practical Experience

This overview highlights the tools and platforms I have worked with in IT support contexts, showing how they are used to manage users, devices, and day-to-day technical issues.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <p><b>Identity &amp; Directory Services (Microsoft Entra ID &amp; Active Directory)</b>- User identity, authentication, access control, and account lifecycle management across cloud and on-prem environments.</p> <p><b>Practical experience-</b></p> <ul style="list-style-type: none"><li>. Managed users, groups, licenses, and roles</li><li>. Supported onboarding, password resets, and account unlocks</li><li>. Configured Conditional Access and MFA workflows</li></ul> <p>Investigated sign-in issues using Entra logs</p> <p>Built an AD lab with GPOs, DNS, and DHCP</p> <ul style="list-style-type: none"><li>. Understood how identity, device, and location affect access</li></ul> | <p><b>Zendesk</b>- IT service management and user support workflows.</p> <p><b>Practical experience:</b></p> <ul style="list-style-type: none"><li>. Logged, tracked, and updated support tickets</li><li>. Categorised issues and followed troubleshooting workflows</li><li>. Communicated updates to users</li><li>. Escalated issues appropriately</li><li>. Used ticketing systems to manage workload and priorities</li></ul>                                                                                                                                                                                                                                                                                                                                                                         |
| <p><b>Microsoft Intune</b>- Device management, configuration, and compliance across managed endpoints.</p> <p><b>Practical experience-</b></p> <ul style="list-style-type: none"><li>. Enrolled devices in a lab environment</li><li>. Created configuration and compliance policies</li><li>. Investigated non-compliant devices</li><li>. Distinguished configuration vs compliance</li></ul> <p>Understood how device compliance feeds into access</p>                                                                                                                                                                                                                                             | <p><b>Wireshark</b>- Network traffic capture and analysis.</p> <p><b>Practical experience:</b></p> <ul style="list-style-type: none"><li>. Captured and reviewed network traffic</li><li>. Analysed request/response flows</li><li>. Investigated DNS and DHCP behaviour</li><li>. Used packet analysis to support troubleshooting</li></ul> <p>Improved understanding of network communication</p>                                                                                                                                                                                                                                                                                                                                                                                                         |
| <p><b>Microsoft 365 Administration</b></p> <p>Administration of users, licenses, and Microsoft 365 services.</p> <p><b>Practical experience:</b></p> <ul style="list-style-type: none"><li>. Managed users and license assignments</li><li>. Navigated Microsoft 365 Admin Center</li><li>. Accessed workload admin centres (Teams, Intune, SharePoint)</li><li>. Reviewed service health and tenant settings</li><li>. Supported common Microsoft 365 access and usability issues</li></ul>                                                                                                                                                                                                          | <p><b>Tenable</b>- Vulnerability scanning and exposure identification.</p> <p><b>Practical experience-</b></p> <ul style="list-style-type: none"><li>. Reviewed vulnerability scan results</li><li>. Interpreted severity ratings</li><li>. Understood common misconfigurations and weaknesses</li><li>. Linked findings to patching and remediation concepts</li><li>. Gained exposure to vulnerability management workflows</li></ul> <p><b>VirtualBox</b>- Virtualisation platform for testing and learning.</p> <p><b>Practical experience:</b></p> <ul style="list-style-type: none"><li>. Built multi-VM lab environments</li><li>. Deployed Windows Server and client machines</li><li>. Tested identity, networking, and policy scenarios</li><li>. Used snapshots to safely test changes</li></ul> |
